

**JOB OFFER (FULL TIME)**

# DATA-MINING ENGINEER

# PYTHON # NUMPY/SCIKIT-LEARN

## WHO IS DIGEIZ ?

DiGEiZ brings Analytics to retailers and shopping centres, to let them enhance their customers' experience. DiGEiZ's comprehensive solution includes state of the art sensors, real time 3-D Deep Learning algorithms and Business Intelligence dashboards.

## TEAM

We are two sales, four developers and growing. We love high performance programming, computer vision, deep learning and intuitive dashboards. If you live for clean and sharp code, come and meet us!

## YOUR MISSION

DiGEiZ sensors bring real-time In-Store Analytics. This is only made possible thanks to the incredible software made by our developer team. The software is autonomous in understanding and reporting traffic information. As we are experiencing un-precedent growth in shopping malls, the data we collect becomes quite significant to compare stores between them and shopping centers.

You will be responsible for designing, improving, and scaling our data-crunching algorithms. You should master classical machine-learning algorithms for clusterisation and scoring. You like to understand the customer needs to turn them into concrete, objective analytics. You will directly interact with the CTO and CEO and have a lot of freedom to design your algorithms.

## YOUR RESPONSIBILITIES

- Design and implementation of data-mining algorithms
- Turn customer pain-points into objective analytics
- Tell beautiful and captivating stories with the data

## YOUR STACK & QUALIFICATION

- Master or PhD degree in Data Science or equivalent
- Strong experience of Python
- Experience with SQL/no-SQL databases

Type: Fulltime (CDI)

Start: ASAP

Localisation: Boulogne

Salary: 45k-65k + stocks
